

ROBOTICS CLUB

SPONSORSHIP TASK 1B- ROBO 87

Good morning sir/maam,

My name is Inaaya Khan and I am a member of the sponsorship team at robotics club MANIT Bhopal. On behalf of the club, I would like to thank you for taking the time to consider a collaboration with us.

As the official robotics club of Manit, we aim to inspire technology with a touch of creativity. Our club is well renowned for conducting a variety of hackathons, competitions and workshops across various fests. With innovation in competition as its motto, the club is popular among peers for conducting contests like make a thon, automax ,maze rush and cadathons every year that attract participation from all over Bhopal. With the sole aim of promoting application of robotics in the real world, we strive to bring about a revolution in the world of technology and robotics education.

Today I'm here to talk about one of our star events — the Auto-Max Workshop which will take place in about 20 days. This workshop is centered around the theme of designing and providing students with hands-on experience on building of robots, helping them understand the fundamentals of sensors, control systems, and real-time problem-solving.

With Robo crates being a well established and respected name in the market, we are reaching out to you with a sincere request - to provide us with 25 Line Follower Robot Kits on rent for the event. These kits will be given to each of the groups in the workshop to build and optimize their own version of line Follower Robots. We will ensure each of the kits will be returned on time and their use will take place under proper mentors.

I strongly believe that both of our institutions will benefit a lot from this partnership. Allow me to address some of these :

As part of our promotion, we will be putting up posters and flyers all across the MANIT campus. Hostels, cafeteria, event buildings will have posters about Automax and its respective sponsors, hence increasing coverage. In addition, posters designs and promotional videos will be uploaded across all our social media handles with more than 6000 followers i.e Instagram, official whatsapp groups, linkedin and facebook. The sponsors will get a special mention in our posters as well. We will be including Robo-Crates in all pre- and post-event publicity too.

Sponsor brand name and logo will be clearly visible in all workshops, gear and competitions conducted during the event.

Automax is a popular workshop and many VIPs and experts visit this event to seek future collaborations in techfests or bulk projects. As a sponsor, robo crates will be to gain a strong exposure to the ongoing tech community and it's trends in the market. Also the students who will be using the kits will get a hands on experience, and will recommend your brand in the future.

We would like to discuss the specifications of this partnership in more detail and explore its potential benefits. We will be patiently waiting for a positive response from your side and would then like to place a meet up for further discussion.

As two institutions whose common yet primary focus is to promote robotics education among the youth of our nation, I am sure this partnership will be a significant stepping stone towards this journey. Looking forward to collaborating with Robo-Crates in the future as well to help tech enthusiasts achieve their goals.

Thank you
Inaaya Khan
